

The *Ips pini* – California

Synergy Semiochemicals Lure (#3386)

The Synergy Lure (#3386) is made of optically active R (-) Ipsdienol that comes in a brown bag.

This lure is specific for use ONLY in California. If you want to target *Ips pini* in any other location please refer to our product #3075.

Field Life: Contents slowly release through the plastic pouches and last approximately **90 days** @ 20° C.

Storage: Stored un-used lures in a freezer.

Lure Hanging: Thread twist-tie (provided) through the hole-punch near the top of the bags. Tether components to the outside of the trap. We recommend tethering the lures toward the bottom third of the trap.

Important Note! Do NOT open the brown bag. These bags are part of the controlled release system and protect the lure's active ingredients from the outside elements.

Safety and Disposal: Components are generally non-toxic chemicals with little risk in handling them. However, users should use gloves or wash their hands after handling and keep lures out of reach from children and pets. Spent lures may be disposed of in normal trash.

General Info: This is a funnel lure used to attract the beetle. Traps are used as part of a monitoring or Integrated Pest Management strategy.
