

# Synergy Semiochemicals Lure (#3402) for *Euwallacea Fornicatus*, Tea Shothole Borer, Polyphagous Shothole Borer & Kuroshio

The Synergy Lure (#3402) is a p-menthenol (quercivorol) miniature bubble (100ul) that comes in a brown bag.

This lure can be used for a wide-range of target species including:

*Euwallacea fornicatus*, polyphagous shothole borer, tea shothole borer, Kuroshio Shothole Borer  
*Platypus quercivorus*, *Xylosandrus crassisculus*, granulate ambrosia beetle, and *Hypothenemus spp.*

Field Life: Contents slowly release through the plastic pouches and last approximately **90 days** @ 20° C.

Storage: Stored un-used lures in a freezer.

Lure Hanging: Thread twist-tie (provided) through the hole-punch near the top of the bags. Tether components together to the outside of the trap. We recommend tethering the lures toward the bottom third of the trap.

**Important Note! Do NOT open pouches or puncture any of the plastic bubbles.** These pouches are part of the controlled release system and protect the lure's active ingredients from the outside elements.

Safety and Disposal: Components are generally non-toxic chemicals with little risk in handling them. However, users should use gloves or wash their hands after handling and keep lures out of reach from children and pets. Spent lures may be disposed of in normal trash.

General Info: This is a funnel lure used to attract the beetle. Traps are used as part of a monitoring or Integrated Pest Management strategy.
